INNOVATIVE APPROACHES TO TEACHING - HELSINKI, FINLAND

Course Overview:

The course is a practical guide which helps to improve quality and effectivity of educational process in any classroom. Encouraging creativity, organizing projects, integrating minority pupils or using ICT as a tool for developing critical thinking are examples of the course modules that will broaden your teaching potential and motivate your students.

Course Methodology:

Thematic and interdisciplinary content will be introduced in nine modules by several tutors. You will work within a group instructional setting; guidance will be given on current theoretical knowledge without being lecture orientated. From practical examples to designing your own tasks and lesson plans, you will exchange ideas and gain new skills in a positive, "learning by doing" training through various collaborative and reflective activities.

Modules:

Module 01 – Theoretical module – 21st Century Skills

Module 02 – Critical and creative thinking, how can it be developed?

Module 03 – Project based learning, Inquiry based learning, Task based learning

Module 04 – Gamifying the Classroom

Module 05 – Modern trends in assessment

Module 06 – Dealing with multicultural classes

Module 07 – Adapting teaching materials to suit the needs of differentiated classes

Module 08 – Metacognition, teaching students to learn

Module 09 – ICT as a tool for development of creativity and critical thinking

Module 10 – Formative vs. summative assessment, portfolios, rubrics, checklists, peer and self-assessment
